1-1/2" X 1" COPPER SERVICE SADDLE SPECIFICATIONS

The saddle is made of 1/4" copper with a 1" male fitting adapter outlet. A Buna N O-ring is used for a dynamic seal. The two halves of the saddle are secured around the pipe with two heavy duty high torque stainless steel worm-drive clamps.

Also known as Nitrile, the Buna N o-ring has excellent resistance to petroleum-based oils and fuels, water and alcohol. Its temperature range is -30 degrees to + 180 degrees.

The stainless steel clamps provide extra holding power in leak-prone areas and high vibration applications. They have good corrosion resistance. The housing and band are type 304 stainless steel. The screw is type 410 stainless steel.

The saddles can be used in systems up to 300 psi.
