2" to 6" Copper Repair Clamp Specifications

The Copper Repair Clamp is made of ¼" copper. A Buna N O-ring is used for a dynamic seal around the damaged area. The two halves of the clamp are secured around the circumference of the pipe with stainless steel bolts, washers and nuts.

Also known as Nitrile, the Buna N O-ring has excellent resistance to petroleum-based oils and fuels, water and alcohol.

The Copper Repair Clamps can be used in systems up to 200 psi. Its temperature range is -30 degrees to + 200 degrees.
